There are many advantages of using AutoCAD over other applications, such as (but not limited to):

- Flexibility. Many users enjoy working with the AutoCAD application because it supports lots of drawing features that enable them to work faster, smarter, and more efficiently than with their old design software.
- Interoperability. AutoCAD is not tied to any specific brand of computer hardware or operating system. It can be used with most hardware and operating systems. It is compatible with other CAD software as well.

1. Field of the Invention The present invention relates to a video conversion device and a method thereof, more particularly to a video conversion device and a method thereof for converting a video signal inputted to a video decoder.

2. Description of the Related Art In a conventional digital video signal processing apparatus, such as a digital video recording and playback apparatus, when converting the number of quantization bits of a video signal and changing the video signal to a video signal with a different number of quantization bits, the whole video signal is stored in a memory as it is. For example, when the number of quantization bits of the video signal is changed to 8 bits by quantizing the video signal to be inputted to a video decoder, the whole video signal is stored in the memory as it is. If the whole video signal is stored as it is, the number of quantization bits of the video signal is 8 bits and the video signal inputted to the video decoder is 8 bit, but in the conventional video conversion apparatus, since the whole video signal is not stored in the memory as it is but is stored as it is as it is in a memory of the video decoder, the number of quantization bits of the video signal is quantized into 8 bits

again. If the video signal is quantized in 8 bits and stored in the memory, the number of quantization bits of the video signal becomes 4 bits and the video signal inputted to the video decoder is 4 bits. If the video signal is quantized in 4 bits and stored in the memory, the number of quantization bits of the video signal becomes 8 bits and the video signal inputted to the video decoder is 8 bit. If the video signal is quantized into 4 bits when the video signal is inputted to the video decoder, since the number of quantization bits of the video signal stored in the memory is 4 bits, the video signal inputted to the video decoder is quantized in 4 bits and stored in the memory as it is. If the video signal is quantized into 8 bits when the video signal is inputted to the video decoder, since the number of quantization bits of the video signal stored in the memory is 8 bits, the video signal inputted to the video decoder is quantized in 8 bits
