3D AutoCAD 2018 can import and export 3D models in Autodesk 3ds Max format. Animation AutoCAD allows animation of the drawing. All of the animation is done using script files. **Actions** In AutoCAD, actions are commands that specify a specific task to be performed or an instruction to be followed. Actions include moving, rotating, mirroring, scaling, etc. They also include selecting elements and performing a modeling or manipulation task. Action settings can be specified either on the command line or on the drawing canvas. Actions can also be saved as a preconfigured state for a command to be invoked repeatedly. **Users interface** AutoCAD provides a number of different user interfaces to create a drawing. **Traditional drawing window** The classic AutoCAD window is designed for users to create and edit drawings. A two-dimensional window is used to view drawings. There are also other tools, such as an add-on that enables print preview. **2D page window** In AutoCAD 2012, a 2D page window was introduced to improve the user interface for drafting. A 2D page allows the user to view and edit a drawing in context, rather than by object. Users can make changes to a drawing directly on the page, which helps improve the overall user experience. When users select a new element, it is added to a page. Changes to that element will then be reflected in the layout and updated to the 2D page. A 2D page shows information from multiple views of the drawing at the same time. The information includes all views of an element and its properties, such as length, width, area, and the properties of other elements. **Annotation window** In AutoCAD 2012, the 2D page window had several limitations. It did not support the display of markup such as text, arrows, or polygons. This was resolved in the AutoCAD 2014 release. The 2D page window supports custom objects with text and symbols. **Web application** AutoCAD allows users to create drawings online from any web browser. **Adobe Flash** AutoCAD supports exporting drawings as Adobe Flash files. This was originally introduced with AutoCAD 2008. **HTML5** AutoCAD 2016 and newer can export drawings in web pages, which are viewed using HTML5 technology.
