Abstract. *The SAS model (Scale Adapted Simulation) was invented by Menter and co-workers. The idea behind the SST-SAS $k - \omega$ model is to add an additional production term – the SAS term – in the ω equation, which is sensitive to resolved (i.e. unsteady) fluctuations. When the flow equations resolve turbulence, the length scale based on velocity gradients is much smaller than that based on time-averaged velocity gradients. Hence the von Kármán length scale, L_{vK} , is an appropriate quantity to use as a sensor for detecting unsteadiness. In regions where the flow is on the limit of going unsteady, the objective of the SAS term is to increase ω . The result is that k and ν_t are reduced so that the dissipating (damping) effect of the turbulent viscosity on the resolved fluctuations is reduced, thereby promoting the momentum equations to switch from steady to unsteady mode.*

The SST-SAS model and the standard SST-URANS are evaluated for three flows: developing channel flow, the flow in an asymmetric, plane diffuser and the flow around a three-dimensional axi-symmetric hill. Unsteady inlet boundary conditions are prescribed in all cases by superimposing turbulent fluctuations on a steady inlet boundary velocity profile.

1 Introduction

RANS turbulence models, such as two-equation eddy-viscosity models, are highly dissipative. This means that they are not likely to be triggered into unsteady mode unless the flow instabilities are strong (such as vortex shedding behind bluff bodies [1–3]). It is a good idea in many flow situations to let the RANS solution go unsteady. First, on a fine mesh, it may well be that no steady solution exists. In that case there is no point in trying to force the flow to a steady solution. Second, if some large movements (either the very largest turbulence structures or some quasi-periodic non-turbulent structure) are allowed to be resolved, the flow will be more accurately captured. In a way, this is the idea of DES [4, 5], in which the turbulence in the boundary layers is modelled (RANS)
