4.2 Histogram screen

The histogram screen shows various aspects of the detector function. To enter the histogram screen, either select the menu options "View ' Histogram viewer..." or click the symbol indicated below.

The following screen appears:

There are two types of smoke density histogram; one shown in blue (the "fast" histogram) which updates every 15 minutes, feeding information to the long-term "slow" histograms (which appear in yellow). These set the detector sensitivity based on the ambient smoke conditions and it takes 24 hours for the two slow histograms (the "day" and the "night" histograms) to complete their learning phase (see section 3.7). Detector sensitivity is based on the fast histogram during FastLearn and is thereafter based on the currently active slow histogram. However, although the positions of the alarm flags are based on the slow histogram, sudden changes in smoke density are
